

Direct Variation

Homework

Name Key
Date _____ Period _____

1. Which of these graphs show direct variation?

2. Complete the tables so that the ordered pairs show a direct variation.

a. $k = 12$

x	y
2×12	24
4×12	48
7×12	84
12×12	144

b. $k = -4$

x	y
-3×-4	12
8×-4	-32
15×-4	-60
19×-4	-76

c. $k = 6.5$

x	y
1	6.5
5×6.5	32.5
7	45.5
8	52

3. The amount a spring stretches varies directly as the weight of the object attached to it. An 8-ounce weight stretches a spring 10 cm. How much weight will stretch the spring 15 cm?

Answer 12-ounce

$y = kx$ $k = \frac{y}{x} = \frac{10}{8} = 1.25$ $k = \frac{y}{x}$
 $\frac{15}{1.25} = 1.25x$ $x = 12 \text{ ounces}$

W	8	X
S	10	15

4. The distance between two towns on a map varies directly with the actual distance between the towns. Seven and a half inches on the map represents 150 miles. What is the actual distance represented by 11 inches on the map?

Answer 220 miles

$y = 7.5$ $x = 150$
 $k = \frac{7.5}{150} = .05$
 $\frac{11}{.05} = .05x$
 $x = 220 \text{ miles}$

Actual X	150	X
map y	7.5	11

In each of the following problems, the value of y varies directly with x. Write the direct variation equation.

$y = kx$

5. $y = 9, x = 3$

$k = \frac{9}{3} = 3$ $y = 3x$

6. $y = -4, x = -1$

$k = \frac{-4}{-1} = 4$ $y = 4x$

7. $y = 8, x = 4$

$k = \frac{8}{4} = 2$ $y = 2x$

8. $y = 8, x = 12$

$k = \frac{8}{12} = \frac{2}{3}$
 $y = \frac{2}{3}x$

9. $y = 16, x = 12$

$k = \frac{16}{12} = \frac{4}{3}$
 $y = \frac{4}{3}x$

10. $y = \frac{10}{7}, x = 5$

$k = \frac{\frac{10}{7}}{5} \rightarrow \frac{10}{7} \cdot \frac{1}{5} = \frac{10}{35} = \frac{2}{7}$
 $y = \frac{2}{7}x$
