1. Mount Washington in Pittsburgh, Pennsylvania gives you a spectacular view of the city. A trolley car takes tourists along the track up and down the mountain. The total distance of the trip is about 1600 feet. The distance can be graphed as a function of time. $f(t) = d$

- a. The y-intercept is (0, 1600) What does this mean for this situation?

The trolley starts 1600 ft from its destination

- b. The x-intercept is (6, 0) What does this mean for this situation?

It takes 6 minutes for the trolley to reach its destination

- c. Graph this relationship.

- d. Estimate the distance the car will be away from its destination after 4 minutes. (520-580)
 ≈ 575 feet

2. Write ordered pairs for the y-intercepts of all three lines.

(0, 3) (0, -4) (0, -6)

What do you notice about all the ordered pairs on the y-axis?

C. The x-value has to be zero

3. Write ordered pairs for the x-intercepts of all three lines.

A(5, 0) B(2, 0) C(8, 0)

What do you notice about all the ordered pairs on the x-axis?

The y-value has to be zero

① Cover Up method or

Linear Equations 11

② $\frac{F}{S}$

4. Graphing from Standard Form using X and Y Intercepts

Equation F $2x + 3y = 12$

$S: \frac{2x + 3(0)}{2} = \frac{12}{2}$
 $x = 6$

Find the x - intercept for the equation.

$y = 0$ cover the y solve for x Answer $(6, 0)$

$\frac{12}{2} = 6$

Find the y - intercept for the equation.

$x = 0$ cover the x solve for y Answer $(0, 4)$

$S: \frac{2(0) + 3y}{3} = \frac{12}{3}$
 $y = 4$

Graph the equation

$\frac{\Delta y}{\Delta x} = \frac{-4}{6} = -\frac{2}{3}$

What is the m? $-\frac{2}{3}$

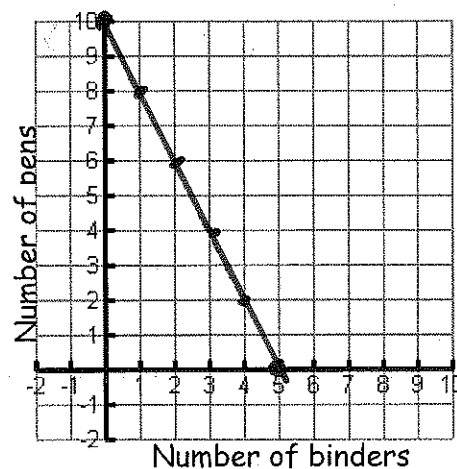

What is the b? 4

5. The school store sells binders for \$4.00 each and pens for \$2.00 each. The equation in standard form is $4x + 2y = 20$. It describes the number of binders x and pens y that you can buy for \$20.

a. Complete the table to show the combinations of binders and pens that can be bought for \$20.

Binders (x)	Pens (y)
0	10
1	8
2	6
3	4
4	2
5	0
6	-2

b. Explain why it does not make sense to find the number of pens you can buy with 6 binders. **Not possible as you would not have enough money**

c. Graph this relationship.

- d. What is the ordered pair for the y-intercept? What does this point mean for the situation?
 $(0, 10)$ They can buy 10 pens if they buy zero binders
- e. What is the ordered pair for the x-intercept? What does this point mean for the situation?
 $(5, 0)$ They can buy 5 binders but no pens.
